

Editor's Commentary: Journal Title Change

David A. Walker

Northern Illinois University

As you may have noticed, the long-standing *Multiple Linear Regression Viewpoints* peer-reviewed journal has changed its title to the *General Linear Model Journal* (GLMJ) beginning immediately with volume 41. At the annual business meeting (American Educational Research Association [AERA] 2015, Chicago), a member-initiated proposal was put forth to the membership in attendance to change the name of the journal from *Multiple Linear Regression Viewpoints* to the *General Linear Model Journal*. The spirit of this proposed title alteration was to update the journal's scope and appeal in terms of manuscript submissions and potential membership interests. GLMJ still intends to continue to address research in the areas of theory, application, and teaching of general linear models. Additionally, the journal will also study and expand upon developments, for instance, in complementary, innovative research areas such as predictive analytics, big data, data mining, multi-level modeling, or structural analyses. After membership discussion, the proposal passed unanimously.

Unquestionably, though, GLMJ continues to be a peer-reviewed journal published biannually by AERA's Special Interest Group (SIG) on the Multiple Linear Regression/General Linear Model. The journal has a registered International Standard Serial Number (ISSN 2379-0091) for its print version and also one for its online version (ISSN 2379-0105), which, the latter, can be accessed at the updated SIG journal site found at the new URL address: www.glmj.org. We hope that you enjoy the updated GLMJ, which for over 40 years has established itself as a quality, peer-reviewed journal with the distinction of being the longest-published SIG journal within AERA.

Sincerely,

David Walker, Editor
